

SPECIAL FILE SAVING GUIDELINES

Our Panels are 2440(h) x 1220 (w)mm. As a general guide for file size 6-8mb per panel is perfect. Files should be no less than 3mb. If in doubt please contact us.

Main programs

Illustrator, Photoshop. Files set up in these software packages may be saved in native format.

Other packages

Please save/export files to EPS/AI format with all placed images included or TIF, JPG, BMP, PS and PSD

Text

Please turn all text into paths/outlines

General

Always ensure that all placed images are supplied with the setup file.

Send all fonts (screen and printer) that have been used in the document.

Note: if you cannot supply fonts, all text must be made into paths/outlines before sending to us.

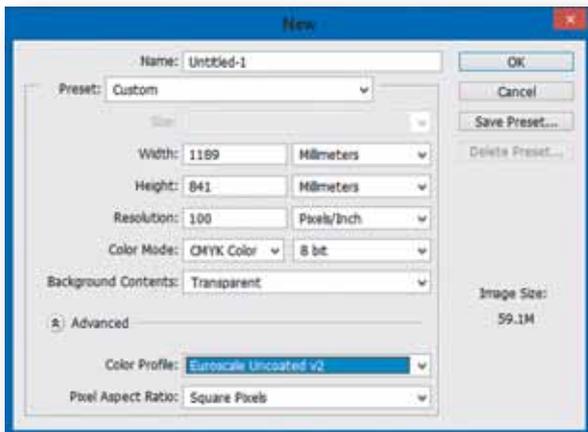

Scaling

Files may be setup to any scale, just ensure that height and length are correctly proportioned to the final size you require.

Scans & Placed Raster Images

All Raster images from file or scans are required to be supplied at a min resolution of 100dpi at full size. Also supplied as CMYK colour NOT RGB.

(File setup as a guide below for an A0 print)

Colour

Please ensure the working colour space is always set to CMYK and NOT RGB.

If your require colour accuracy, Please provide colour accrete files, making best use of spot colours and generic colour swatches such as " Ral and Pantone ". Then save all this information within the finial file.

PDF files.

Please be aware that although PDF file are a fantastic way of preflighting your files for print, there can be issues, unseen with monitors. Any transparencies or special effects in combination with images can cause unexpected results with any postscript printers. Before saving a PDF file, ensure all transparencies have be flattened or rasterised. Also ensure no additional compression has been applied to placed images, preventing pixilation.
